Running & Squeeze Cementing Procedure - ACT-CR-5500 Cement Retainer

Controlled Procedure RSP-CR-5500 Rev B | Product: ACT-CR-5500

Prepared By	A. Gutierrez
Checked By	S. Nguyen
Approved By	J. Martinez, P.E.
Effective Date	2024-09-02

1. Scope

Wireline setting of the ACT-CR-5500 cement retainer and subsequent tubing-conveyed squeeze operation with the ACT-SRT-55 stinger.

2. Reference Documents

- BOM-CR-5500 Rev B
- DS-CR-5500
- MAN-BP-SER (setting steps)
- API RP 65-2

3. Equipment & Materials Required

Equipment / Material	Requirement
ACT-ST-10 setting tool + AK-55 kit	Redressed, F-82 current
ACT-SRT-55 stinger assembly	New chevron seals fitted
Cement unit w/ recorder	Calibrated
Slickline gauge cutter run	Confirm tubing drift 2.00 in. min

4. Procedure

Steps marked 'QC HOLD' are mandatory hold points: work shall not proceed past a hold point without sign-off by the responsible party in the right-hand column. Record actual values on the job traveler.

4.1 Wireline Setting

Step	Action	Responsible / Sign-off
S1	Set retainer per MAN-BP-SER Section 3 at design depth; shear-out 38,000 lbf +/- 10%.	WL Eng
S2	Pressure test casing above retainer to 1,000 psi below casing rating, 15 min.	Co. Man

4.2 Squeeze Operation

Step	Action	Responsible / Sign-off
Q1	RIH with SRT-55 stinger on tubing; tag retainer, pick up 2 ft, record weight.	Operator
Q2	Sting in: 5,000-8,000 lbf down. Valve opens - establish injection at < 2 bbl/min.	Co. Man

Step	Action	Responsible / Sign-off
Q3	Perform injection test per squeeze design; record rates/pressures.	Cementer
Q4	Mix and pump cement per program; displace to stinger depth + calculated shoe factor.	Cementer
Q5	Squeeze to design pressure (max 5,000 psi pump-through rating).	Cementer
Q6	Sting out (straight pull); valve closes trapping squeeze pressure below.	Operator
Q7	Reverse circulate excess cement above retainer, min 1.5 tubing volumes.	Cementer
Q8	POOH; WOC per program; drill out retainer if required (Class 40 cast iron).	Operator

5. Notes & Cautions

- Never rotate tubing while stung into the retainer.
- If squeeze pressure exceeds 5,000 psi with the stinger latched, bleed back immediately - the pump-through valve is the limiting component.
- Retainer holds 10,000 psi from below after sting-out.

6. Sign-off Record

Role	Name	Signature	Date
Prepared	A. Gutierrez	*/signed electronically/*	2024-09-02
Checked (QA)	S. Nguyen	*/signed electronically/*	2024-09-02
