

ACT-SSD-2875 Sliding Sleeve (Sliding Side Door), 2-7/8 in.

Technical Datasheet DS-SSD-2875 Rev B | Product family: ACT-SSD-2875

1. Product Overview

The ACT-SSD-2875 sliding sleeve provides selective communication between tubing and annulus for circulation, selective zone production, and displacement operations. The inner sleeve shifts open or closed with a standard B-type shifting tool on slickline (ACT-SFT-20). Redundant chevron seal stacks isolate the ports in the closed position.

2. Applications

- Circulating between tubing and annulus
- Selective multi-zone production
- Displacement to underbalanced fluid
- Contingency kill circulation path

3. Features

- X-profile in sleeve top accepts standard slickline shifting tools
- Collet detent holds sleeve positively open or closed (350 lbf detent)
- 5-element chevron seal stacks above and below ports
- 12 x 0.50 in. ports - 4.7 sq-in flow area
- QPQ nitrided sleeve resists scale and wear
- NACE MR0175 compliant, bodies 22 HRC max

4. Technical Specifications

Parameter	Specification
Tubing Size	2-7/8 in. EUE 8RD
Maximum OD	3.668 in.
Minimum ID (open bore)	2.313 in.
Port Flow Area	4.7 sq-in (12 x 0.50 in. ports)
Working Pressure	10,000 psi
Temperature Rating	325 degF
Shifting Force (typ.)	350 lbf detent; 600 lbf max at seal friction
Shifting Tool	ACT-SFT-20 (B-type), slickline
Service	Sour, NACE MR0175

All ratings are at ambient temperature unless otherwise noted. Performance envelope per API 11D1 V3 qualification testing where indicated. Consult ACT Engineering for combined load conditions.

5. Materials of Construction

Component	Material
Bodies	AISI 4140, 22 HRC max (NACE)
Inner sleeve	AISI 4140, QPQ nitrided

Component	Material
Detent ring	Beryllium copper Alloy 25
Seal stacks	HNBR/PTFE/PEEK chevron

6. Ordering & Reference Documents

Order by part number and specify: casing size and weight, service trim (standard or NACE sour), elastomer option, end connections, and any customer inspection requirements. Related documents:
